

Northern Tablelands Wildlife Carers - Lily Denshire

Last year I was fortunate enough to be given a grant by NWC to purchase a Brinsea incubator for the purpose of caring for microbats.

Not long after I made the purchase, I was called to pick up a wet, cold, underweight bat who needed to go in it. The incubator has been in almost constant use since then. It has housed bat pups; cold and underweight bats; injured bats who need heat support to recover; wet bats who needed a bath after coming in contact with sticky glue traps.

This incubator has enabled me to give the best recovery or growing conditions to these animals, and most of them have survived. I don't know how I would have done without

Thank you so much. The bats and I appreciate it!
