## FAWNA Intensive Care Unit

I have found the intensive care unit perfect for nestling birds so far. It has 3 fan speeds which is invaluable for very small animals that cannot retain heat. With the different fan speeds the heat can reach right to the bottom of the box giving a very regular heat distribution.

The ICU has been used for a noisy miner nestling so far.

Due to availability I upgraded to a more expensive model at my own expense.

Thank you NWC for your assistance to myself and FAWNA animals in my care in the Northern Region.

Regards
