

NWC Wildlife Rehabilitation Grants Program 2024-2025

Grant Recipient: Sunraysia Wildlife Carers Inc.

Grant Amount: \$4,385.25

Project Description: Flood damage repair and shelters for macropod release site

Acquittal Report

It is once again, with a lot of gratitude that we thank the NWC for their continued support with grant opportunities.

Our soft release site was heavily affected with the latest floods. The tree line, that identified the fence line did not survive, and we were left with a very bare paddock indeed. The grant money has been used to build extra shelters (weather protection) and to purchase shade cloth to help identify the fence.

The outcome is brilliant. Our latest release was great. The macropods settled really quickly, with no injuries. The new shelters provide weather protection, and more importantly, shade. (already in spring, we have had days in the high 30's)

Before

After 😊

Shelter/s

The future plan is to revegetate the fence line for extra protection.
